Air Quality: Worldwide Analysis and Forecasting of Atmospheric Composition for Health

OBJECTIVES
Develop tailored products & services to help mitigate air pollution and their effects on human health and the economy

CONSORTIUM
12 partners from Germany, France, Finland, Israel, Spain, Netherlands, Czechia, Chile, USA and China

RESULTS
Seven innovative downstream products and services for improving air quality forecasts and attribution.
The project will develop a supply chain leading to the generation of seven downstream products and services for improving air quality forecasts and attribution. These prototypes will be based on existing space and in situ observations of air quality and tailored to the identified needs of international users. These innovative products and services are aimed at improving public health and optimizing service provided by the energy sector in different regions of the world. The consortium includes knowledge institutes, applied science organizations and business-oriented partners to define the optimal functionalities of the products and services.
